

XM Radio's "Instant Traffic & Weather" feature is a 7X24 "Instant" traffic and weather service, not 6-8 times an hour, if they happen to present it when I need it. It provides an emergency service at ALL times in the major markets such as Washington DC, where I reside. I cannot imagine by what justification the "Leadership" of this nation would deny access to such a valuable and versatile capability to radio listeners across the country. I would like those whose support HR 4026 to please tell me exactly how is too much "real-time" (traffic and weather) information a bad thing.....
